

# SC Intercom

**Teradon's** SC Intercom is a multi-channel, microprocessor-controlled, programmable communication system providing a broad range of audio communication functions.

The communication functions are initiated and controlled from any one of the Administrative Telephone Consoles. The Consoles are attractive desktop handsets that display all SC Intercom functions on a large LCD display, keeping you informed of current console status at all times.

The built-in master clock, with internal battery backup, can be programmed to control timed tone distribution to any or all remote stations. The Master Clock also auto-corrects any of Teradon's synchronous analog, digital or wireless clocks.

The SC Intercom System has a built-in communication port for a PC, allowing you to use Teradon's configuration software to efficiently program all the SC Intercom functions and retrieve data for review and printing.

*"Finally -  
a school intercom manufacturer  
with fresh ideas and solutions."  
Ed G. of Antronix*

Creativity in programming with different bell tones for various changes in the day will enliven the school atmosphere.

SC Intercom will integrate with most telephone systems.

The SC Intercom can grow into a full district solution.

Update and adjust the intercom settings and bell schedules over the Internet.

Call-in buttons can be programmed for different levels of calls.

Call-in buttons utilize "caller ID" technology for ease of identification of the call-in location.

Factory assembled head-end racks allow for a quick and flawless installation.

The SC Intercom is capable of multiple Administrative Telephone Consoles giving the school a true intra-school communication system.

Built-in tone generator provides you several distinctive tones to choose from.

Multiple independent audio communication paths, letting you choose your audio inputs.
